# NILIT BREEZE

## NILIT® BREEZE - SOFT-TOUCH, COMFORTABLE HOSIERY WITH THE UNIQUE "COOLING EFFECT"

During the warm summer months, there's almost nothing as refreshing as a cool breeze (perhaps apart from a glass of icy lemonade).

Nilit® has developed a specialty yarn for summer with unique "cool touch" properties. With the introduction of Nilit® Breeze, Nilit® now brings the same refreshing effect to fine hosiery.

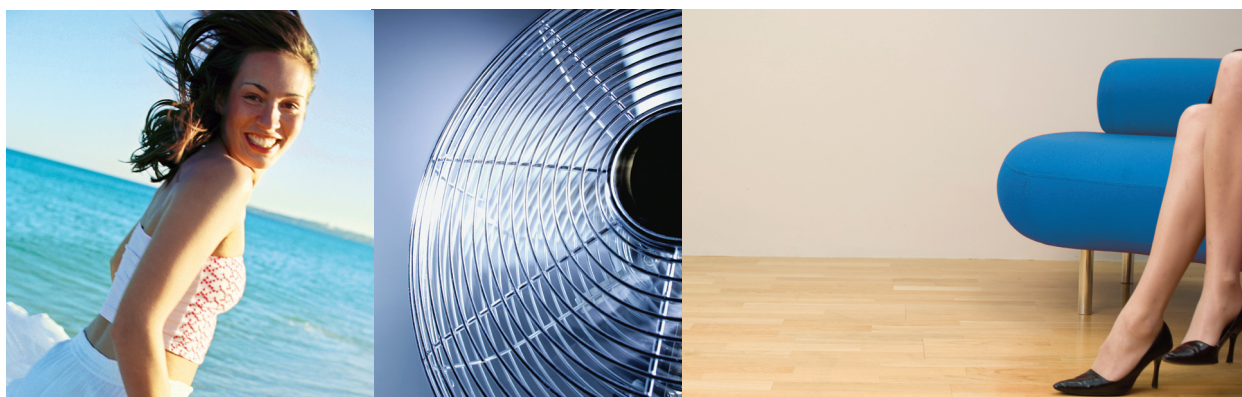

### THE MAKING OF ONE "COOL" FIBER

With a flat ("cotton-like") cross-section, Nilit® Breeze fibers provide the wearer with a pleasantly soft and airy sensation on the skin.

Made from a super dull polymer, Nilit® Breeze is spun as a highly transparent, 4-filament flat yarn with a low denier (13/4 and 17/4). Use of a super dull polymer provides Nilit® Breeze with its very gentle touch and, at the same time, TiO<sub>2</sub> micro-particles protruding from the filament surface, create microporous channels between the yarn and the skin for excellent ventilation and maximum breathability.

Hosiery fashioned from Nilit® Breeze not only feels extra comfortable next to the skin, but they wear extremely well, even after repeated washings.

### THE MAKING OF ONE "COOL" FIBER

#### NILIT® BREEZE BRINGS TOGETHER THREE COMPONENTS:

- Flat yarns give flexibility and smoothness to the finished product.
- Special flat ("cotton-like") cross-section adds suppleness and gives a pleasant feel.
- Use of a super dull polymer creates a soft touch and provides superior ventilation.
